93 teachers, students, and community members came together to share their ideas for Solar Preparatory School for Girls’ Out Teach Learning Lab. Adults and children alike used their creativity to imagine their perfect outdoor classroom.

**Designing**

Students, teachers, and community members worked through several activities to determine their goals for the outdoor learning lab. They hope that their space will introduce students to recycling, new experiences & having fun while learning. Teachers would like the space to introduce life cycles, cross curricular learning, SEL, school pride and ownership.

**Sharing**

Sofia (pictured right), one of the winners of the design competition, shared her ideas for the outdoor learning lab. She would like to see an outdoor classroom with water features, a rock garden, and shaded areas. The competition’s other winners, Josilyn, Hayden and Mia, also included an animal habitat, a pollinator garden and fruit trees.
